Why electric trike?

Our Electric tricycle is designed specifically to cater to families, it offers a flexible and safe way to carry one or two young children as well as shopping or other items.

Compact, safe and emission-free, with its custom-designed seat and seat belts, the etrike means you can leave the car behind. Your kids will love coming along for the ride, a rain canopy keeps the worst of the weather at bay and with Bosch power providing pedal assistance, the ride is smooth and easy.

We also think it will be suitable if you are beyond the age of a driving licence or looking for a more stable ride, the etrike offers easy handling and parking.

Why electric bikes?

Electric Bicycles are very similar to conventional bikes in construction but they have been fitted with a battery, a controller, handlebar console and a motor in order to assist the cyclist. These can be a kit fitted to a standard bike or a bike designed for the purpose, with the electrics built into the bike.

Some bikes have their motors in the front wheel some in the back wheel and some drive through the chain and have Lithium batteries. They are very easy to ride and anyone who can ride a bike will instantly feel at home but we need to be aware of illegal bikes.

For the **TWO WEEK** trial see the website [contact form](http://contact).
